Here is the algorithmic extraction and detailed breakdown for **Batch 7 (Videos 61 through 70)** of the Trade City Pro technical analysis curriculum.
This batch transitions into the operational core of Arshia Azizpour's execution: **The Real Foundations of Profitability**, **Futures Capital Allocation**, the **Market Cycle Hierarchy (HWC, MWC, LWC)**, **Market Structure & Multi-Timeframe Alignment**, **Momentum Execution Mechanics**, and the **Leverage / Risk Governor Engine**.

Video 61: "تنها راز موفقیت در ترید ارزدیجیتال | کافیه همین ویدیو رو ببینی! " (Part 61)

- **Core Concept**: Systemic demystification of technical analysis; establishing why an algorithm's edge is strictly mathematical rather than visual 1, 2.
- **System Architecture & The "Indeterminate Equation"**:
- Technical analysis alone does not yield a positive edge because finding a variable \\(X\\) in the market immediately alters the macro environment, creating a new variable \\(X'\\) (the observer effect / feedback loop) 2.
- Technical setups (S/R, RTM, Smart Money, ICT, Elliott) serve purely as an **arbitrary baseline framework** to apply quantitative laws 1, 3.
- **Algorithmic Rules & Invalidation Logic**:
- **Capital Management as Master Filter**: An execution module that lacks strict position sizing and drawdown caps is invalid, regardless of win rate 2.
- **Losing Streak Calibration**: For an edge with a \\(30\%\text{–}40\%\\) win rate, an algorithm must be hard-coded to survive **6 to 7 consecutive stop-outs** without altering parameters 3.
- **Statistical Logging**: Compulsory recording of metrics (Execution Slippage, Max Drawdown, Recovery Factor, Profit Factor). Algorithmic rule tweaks are prohibited until a minimum forward sample size of \\(N \ge 100\\) trades is logged 3, 4.

Video 62: "مسیر درآمد دلاری ارشیا عزیزپور از ترید فیوچرز" (Part 62)

- **Core Concept**: The 6-stage operational pipeline for systematic crypto futures trading 5, 6.
- **The 6 Core Pipeline Modules**:
- *Taking Profit (Scaling Matrix)*: Fixed tiered exits (\\(2R, 5R, 10R\\)) 6.
- *Capital Sizing*: Risk-of-Ruin allocation adjusted per setup grade 6.
- *Risk Governor*: Daily and weekly maximum loss thresholds 6.
- *Technical Identification*: Market cycle structure and structural swing levels 6.
- *Entry Triggers*: Candlestick pattern geometry and breakout confirmation 6.
- *Stop Optimization*: Anchoring behind order book walls and volatility extremes 6.
- **Algorithmic Trigger Hierarchy**:
- **Breakout After 2nd Touch**: Reject first touch; execute strictly after the second confirmed test of an established structural boundary 7.
- **Dow Wave Continuation**: S/R breaks during mid-trend continuation (second wave) where price is clear of high-timeframe structural barriers 7.
- **High-Momentum 15m Candle Setup**: Flagship entry supported by the 7 SMA 7.

- **The Trader Sieve Constraint**: Real-world system survival follows an aggressive filter: 95% fail from lack of capital management; of the remaining 5%, half fail from lack of written checklists and trade journals 8.

Video 63: "هرچی از سایکل‌های بازار می شناسی بنداز دور بر اساس پرایس اکشن" (Part 63)

- **Core Concept**: Quantitative Market Cycle Modeling; replacing rigid cycle tools with dynamic **High Wave Cycle (HWC)**, **Medium Wave Cycle (MWC)**, and **Low Wave Cycle (LWC)** 9, 10.
- **The 3-Tier Cycle Taxonomy**:
- **HWC (High Wave Cycle)**: Macro trend vector (Weekly/Daily). Defines absolute trade direction 11, 12.
- **MWC (Medium Wave Cycle)**: Structural swing engine (4-Hour/Daily). Identifies consolidation boxes, major corrections, and structural pivots 11, 12.
- **LWC (Low Wave Cycle)**: Micro-noise & execution arena (15-Minute). Used strictly for timing entries, setting initial tight stops, and generating high R:R ratios 12, 13.
- **Algorithmic Regime Engine**:
- **Trend Alignment Phase (90% of Trending Time)**:
- When HWC is Bullish and MWC pulls back into a correction, LWC turns Bearish.
- *System Rule*: **Do not short the LWC downtrend**. In 80–90% of cases, the LWC downtrend is merely creating an optimal, discounted Long entry in alignment with HWC 13.
- **Structural Reversal Sequence (The 10% Exception)**:
- Genuine macro trend reversals require a bottom-up phase transition:
- \\\text{LWC transitions to Range/Opposite} \to \text{MWC transitions to Range/Opposite} \to \text{HWC flattens out}\\
- Never forecast an HWC reversal based on a single 15-minute or 1-hour breakdown 12.

Video 64: "این تکنیک تحلیل تکنیکال ما رو سود ده کرد ساختار مارکت" (Part 64)

- **Core Concept**: Multi-timeframe structural mapping, relative timeframe coordination, and stop-loss placement 14, 15.
- **System Definitions & Rules**:
- **Timeframe Relativity Principle**: Timeframes exist solely to measure distance traveled per unit of time, not as isolated trading environments 16.
- **Execution Isolation**:
- Map key levels and cycle phases on MWC (4H/Daily) 17, 18.
- Step down to LWC (15m) to locate the entry trigger 17, 19.
- Once triggered, **stop monitoring the trade on the 15-minute chart**. Continuous 15m monitoring triggers emotional trade interference. Manage the open position and trail stops strictly based on 4-Hour candle closes 19, 20.
- **Decoupled Cycles (The Two-Way Trading Box)**:
- When HWC and MWC are both flat/ranging, they exert zero directional force on price 17.
- *Action*: Unlock bidirectional execution on LWC. Set tight Stop-Buy and Stop-Sell triggers at the consolidation box extremes, with fast take-profit targets (\\(2R\text{–}3R\\)) 17, 21.

Video 65: "راز نهایی تحلیل تکنیکال که 90% تریدرها نمیدونند" (Part 65)

- **Core Concept**: Mechanics of rapid price displacement; Market Orders (Aggressors) vs. Limit Orders (Passive Liquidity) 22, 23.
- **System Principles**:
- Price does not move because of a chart pattern, trendline, or indicator reading. It moves solely when the dollar volume of incoming **Market Taker orders exceeds the resting depth of Limit Maker orders** at the front of the book 23, 24.
- **Algorithmic Breakout Constraints**:
- **Volume vs. Depth Validation**:
- Before a resistance level can break, incoming taker buy volume must have the momentum to absorb the resting sell wall (e.g., \$10M taker buying vs. \$10M resting asks) 25.
- If volume contracts while price approaches a heavy limit wall, **abort breakout trigger orders**; price will bounce off the wall 25.
- **The Elimination of "Chasing"**:
- When price expands violently via an outsized candle, the stop-loss distance becomes too large, destroying the mathematical Risk-to-Reward ratio 22, 26.
- **Rule**: Never execute market orders following an extended impulse. Execute exclusively via pre-set **Stop-Market Trigger Orders** anchored directly at the boundary prior to displacement 22, 27.

Video 66: "با مومنتوم جا ماندن را فراموش کن" (Part 66)

- **Core Concept**: Systematic execution during high-volatility momentum environments and crypto bull-run regimes 28, 29.
- **Algorithmic Momentum Indicators**:
- BTC/USDT breaks macro resistance + BTC.D breaks down \\(\to\\) High-Beta Altcoin Momentum Regime activated 29.
- Multiple timeframes (15m, 1H, 4H) simultaneously reading RSI > 70 (Overbought) confirms strong trend momentum 30.
- **System Execution Rules**:
- **The "Any Valid Technical Setup" Rule**:
- In strong momentum expansions, deep pullbacks to standard support do not occur 30.
- The algorithm switches to aggressive continuation mode: any valid micro-setup (15m consolidation breakout, minor 7 SMA pullback, or Stop-Buy above the prior bar's high) triggers an immediate entry 26, 30.
- **The Capital Recycling Engine (Futures to Spot Conversion)**:
- Trade high-momentum moves on Futures using leverage.
- When the position reaches its target (\\(+5R\text{–}10R\\)), close the futures contract completely 31.
- Reinvest the realized net profits directly into the asset's Spot balance while keeping trading margin liquid for the next setup 31, 32.

Video 67: "هرچی از کندل شناسی میشناسی بنداز دور پارت ۳" (Part 67)

- **Core Concept**: Systematic decomposition of candle geometry and velocity 33.
- **The Quantitative Candlestick Vector**:
- Candlestick analysis is modeled through 5 discrete variables 33:
- *Real Body Size*: \\(|\text{Close} - \text{Open}|\\).
- *Wick Asymmetry*: Top vs. bottom wick length relative to real body.
- *Color Ratio*: Ratio of bullish to bearish bars over a rolling \\(N\\)-candle window (e.g., 5 green vs. 1 red bar) 33, 34.
- *Velocity of Peak Formation*: Number of bars required to print a new high versus the number of bars spent pulling back 33.
- *Range Compression*: Diminishing total range (\\(\text{High} - \text{Low}\\)) indicating loss of participation 33.
- **Algorithmic Filter**:
- If price advances to a new high but candle real bodies steadily decrease while the opposing wick length increases, institutional buying is decelerating. Freeze new trend entries and trail protective stops.

Video 68: "درآمد دلاری از کندل شناسی در ۶۰ دقیقه بر اساس پرایس اکشن" (Part 68)

- **Core Concept**: Modeling the market as a two-player seesaw (Buyers vs. Sellers / Market vs. Limit) 35.
- **Microstructure Logic**:
- Every market interaction is zero-sum at the transactional level: aggressive taker volume eats through passive maker depth 35.
- A candle's close represents the temporary resolution of that auction 36.
- **Algorithmic Rule for S/R Liquidation Traps**:
- When price tests support and prints an aggressive downward wick that immediately pulls back and closes inside the boundary (absorption wick), sellers have been fully absorbed by resting bids 36.
- **Trigger**: Place a Stop-Buy trigger above the high of that rejection candle to enter as trapped short sellers are forced to cover.

Video 69: "استراتژی رایگان ترید ارزدیجیتال بر اساس پرایس اکشن" (Part 69)

- **Core Concept**: The "LA" (Layers of Arshia / Laye-haye Arshia) Multi-Layered Systematic Trading Framework 37, 38.
- **Algorithmic Setup Mechanics**:
- **Structure**: A directional impulse is followed by a horizontal consolidation range 38.
- **The Asymmetric Touch Sequence**:
- Price ceases to reach the bottom boundary of the consolidation box, instead forming a **Higher Low inside the range** 39.
- Successive candles take longer to retrace downward (sluggish sell-side) and fewer candles to push back toward the upper boundary (aggressive buy-side) 39.
- **Execution**:

- Position a **Stop-Buy (Market)** order slightly above the consolidation ceiling 38, 40.
- Stop-Loss is placed below the internal Higher Low pivot within the box 40.
- Invalidation: If price pierces the opposite boundary of the box before triggering, cancel the order immediately.

Video 70: "همه چیز در مورد لوریج در 20 دقیقه" (Part 70)

- **Core Concept**: Quantitative leverage mechanics, margin calculation, and the Dynamic Leverage / Stop Distance Governor 41.
- **The Mathematical Leverage Formula**:
- Leverage is strictly a **margin multiplier**, never a determinant of risk. Risk is determined entirely by position size and stop-loss distance:
- \\\text{Actual Risk (\$)} = \text{Position Size} \times |\text{Entry Price} - \text{Stop Price}|\\
- **The Algorithmic Liquidation Governor**:
- The system enforces a safety buffer ensuring the liquidation price sits well beyond the structural stop-loss:
- \\\text{Max Allowed Leverage} < \frac{100\%}{\text{Stop-Loss Distance \%} \times 1.5}\\
- *Constraint Table*:
- If Stop Distance is **\\(2\%\\)**: Maximum permitted leverage is **\\(25\times\text{ to }30\times\\)**.
- If Stop Distance is **\\(5\%\\)**: Maximum permitted leverage is **\\(10\times\text{ to }12\times\\)**.
- If Stop Distance is **\\(10\%\\)**: Maximum permitted leverage is **\\(5\times\\)**.
- *Safety Invalidation*: An order is rejected by the risk engine if the calculated liquidation price falls closer to entry than the structural stop-loss.

Progress Tracker

- **Completed Batches**:
- Batch 1: Videos 1–10 (Foundations, Dow Theory, S/R, Capital & Risk Management)
- Batch 2: Videos 11–20 (Market Dominance Ratios, BB on RSI, Risk Expectancy, Profit Ladder)
- Batch 3: Videos 21–30 (Trend Health Analysis, Geometry, Multi-Timeframe Velocity, Volume Dynamics)
- Batch 4: Videos 31–40 (VPA Modeling, 3-SMA System, 15m Candle Setup Engine, Level 2 Order Books)
- Batch 5: Videos 41–50 (Order Book Microstructure, Indicators vs. Oscillators, Methods 1–5 of Oscillator Analysis)
- Batch 6: Videos 51–60 (Recalibration, MF Multi-Timeframe Scaling, MACD/ROC/ADX Mechanics, Session Timing, Written Plans)
- **Batch 7: Videos 61–70 (HWC/MWC/LWC Cycles, Market Structure, Momentum Sizing, LA Setup, Leverage Mechanics)**
- **Upcoming**:

- **Batch 8 (Videos 71–80)**: Entry Optimization, The Pre-Trade Checklist, The 10 Commandments of Trading, Where to Take Stops, Advanced Capital Compounding, and Fibonacci Parts 1–4.

Whenever you are ready, let me know to proceed with **Batch 8 (Videos 71 through 80)**.
