Here is the detailed algorithmic extraction and system outline for **Batch 8 (Videos 71 through 80)** of the Trade City Pro technical analysis curriculum.
This batch covers the operational and quantitative mechanics of **Optimal Entry Locations & Timing vs. Price**, the systematic **Pre-Trade & Post-Trade Checklists**, the **10 Commandments of Execution**, **Stop-Loss Math & Justified Invalidation**, **Advanced Capital Management**, and the foundational theory of **Market Retracement vs. Extension via Fibonacci**.

Video 71: "چطوری بهترین نقطه ورود داشته باشیم" (Part 71)

- **Core Concept**: Dismantling the retail illusion of "Sniper Price Entries" in favor of **Stop-Loss Geometry and Trade Timing** 1, 2.
- **System Principles & Mathematical Realities**:
- **Price Agnosticism**: In an algorithmic breakout or momentum framework, the absolute numerical entry price does not matter 1, 2. An entry at \$100 vs. \$105 is irrelevant to profitability; what dictates expectancy is the **Stop-Loss distance (\\(\text{Risk}\\%\\))** and the **time required to reach target** 1, 2.
- **The "Higher Entry / Higher R:R" Paradox**:
- Entering early at the bottom of a consolidation often requires a wide structural stop-loss (e.g., 10%), resulting in a sluggish \\(1:2\\) or \\(1:3\\) Risk-to-Reward 1, 2.
- Entering later on an accelerated breakout past resistance allows the stop to be tightened directly behind the breakout trigger candle (e.g., 2% stop), generating a fast \\(1:5\\) to \\(1:10\\) R:R on the same upward impulse 2.
- **Execution Rule**: Eliminate FOMO around "missing the cheapest price" 2. The algorithm is programmed to enter strictly when momentum confirms displacement, prioritizing tight risk exposure over bargain hunting 1, 2.

Video 72: "چک لیست قبل از باز کردن پوزیشن با تحلیل تکنیکال بر اساس کندل شناسی" (Part 72)

- **Core Concept**: The Pre-Trade Checklist (Automated Decision Matrix) and Post-Trade Protocol to eliminate emotional interference 3-5.
- **The 10-Step Pre-Trade Filter Pipeline** (Must evaluate prior to committing capital) 6-13:
- BTC Check: Determine Bitcoin's macro trend state (Trending Up, Trending Down, or Range-bound) 6.
- BTC.D Check: Measure Bitcoin Dominance trajectory to establish whether BTC or Altcoins will capture directional capital 6, 7.
- TOTAL2 / USDT.D Check: Verify stablecoin liquidity outflow and altcoin aggregate market cap alignment 7.
- Watchlist Alignment: Filter coins showing breakout structures synchronized with macro market moves 7, 8.
- Touch-Count Filter: Validate that the level has been tested multiple times (\\(\ge 3\\) touches) to weaken opposing limit walls 8.
- Breakout Dynamics: Confirm whether the setup bar contains seller absorption (lower wick on bullish breakout) or buyer failure 9.

- RSI Momentum Filter: Check if RSI is crossing into Overbought (>70) or Oversold (<30) on lower timeframes while maintaining runway on higher timeframes 9, 10.
- Trend Alignment: Ensure the trade direction aligns with the higher-timeframe cycle 10.
- Target / Expected R:R Check: Calculate the distance to the next major opposing barrier; **if \\(\text{R:R} < 1:2\\), cancel execution automatically** 11, 12.
- Risk Budgeting: Assign risk tier (\\(0.25\%\\) for lower confluence up to \\(1.0\%\\) for high-conviction full alignment) 12, 13.
- **Post-Trade Execution**:
- Set price alerts at partial take-profit levels (\\(2R, 5R\\)) and trailing stop thresholds 14.
- Step away from lower-timeframe live tick observation; log execution metrics into the trading journal immediately 5, 14.

Video 73: "فرمان ترید برای رستگاری ۱۰" (Part 73)

1. **Core Concept**: The 10 Invariant Execution Laws governing trade survival and systematic edge 15-18.
2. **The 10 Invariant System Rules**:
3. *Probabilistic Evaluation*: Quantify the historical mathematical probability of the setup based on past backtesting/forward-testing samples before entering 17.
4. *Maximum R:R Expectancy*: Verify that the market structure allows a minimum achievable \\(1:2\\) to \\(1:5+\\) Risk-to-Reward.
5. *Market Cycle Positioning*: Know your exact position in the macro wave structure (Primary Trend, Secondary Correction, or Accumulation/Distribution Phase) 18.
6. *Trend Wave Verification*: Confirm whether the trade is in the high-momentum second impulse wave or an exhausted late-stage extension.
7. *Order Book Depth Validation*: Check that resting maker walls protect your stop-loss and do not block your breakout path.
8. *Session Timing*: Execute during high-liquidity session overlaps (London/New York); avoid low-volume dead zones.
9. *Invariable Stop-Loss*: A trade without an automated stop-loss order placed simultaneously with entry is an operational violation.
10. *Risk Scale Cap*: Never risk more than \\(1.0\%\\) of account equity on any single execution.
11. *No Retaliation / Revenge Trading*: Consecutive losses require an automated trade freeze, not increased risk.
12. *Reason for Execution*: Every order must have an explicit technical setup justification; boredom or arbitrary profit targets are prohibited 19.

Video 74: "کجا می ارزه استاپ بخوریم" (Part 74)

- **Core Concept**: The Concept of "Justified Stops" versus "Unjustified Capital Destruction" 20, 21.
- **System Definitions & Invalidation Rules**:

- **Unjustified Stop (Fatal Error)**: Any stop-loss triggered on a position opened outside system rules (e.g., chasing green candles, trading without a checklist, opening early inside a choppy range) 20.
- **Justified Stop (Operational Cost)**: A stop-loss triggered on a valid setup with high confluence (multi-timeframe alignment, \\(\ge 3\\) touches, clear consolidation breakout) 20, 22.
- **Asymmetry of Opportunity**:
- If an asset breaks out of a multi-week consolidation box, missing the move means losing out on a potential \\(10R\text{–}20R\\) trend 22.
- In this scenario, taking an initial stop-out on a false break is fully justified because the potential payout mathematically covers multiple failed attempts 22.
- **Structural Reversal Criterion**: A proper stop must be placed at the exact coordinate where, if hit, the original market thesis is dead and an opposing trade is technically viable.

Video 75: "مدیریت سرمایه پیشرفته" (Part 75)

- **Core Concept**: Dynamic Compounding, Tiered Capital Allocations, and Streak-Adjusted Risk Governors 23.
- **Algorithmic Risk Governor Engine**:
- **Dynamic Equity Baselining**:
- Recalculate contract dollar risk at designated balance milestones (e.g., re-evaluating risk sizing every 10% increase or decrease in net equity rather than recalculating tick-by-tick).
- **Losing Streak Governor**:
- Standard baseline risk = \\(0.50\%\\) of account capital.
- If consecutive losses \\(= 3\\): Drop risk to **\\(0.25\%\\)**.
- If consecutive losses \\(= 5\\): Halt execution for 48 hours to evaluate market regime shifts.
- Resume standard \\(0.50\%\\) risk only after a winning trade restores positive expectancy.
- **Anti-Martingale Scaling**: Never increase position size or leverage to recover losses. Capital compounding occurs only when equity is making new highs.

Video 76: "اشتباه همه در رسم فیبوناچی شروع موج ها" (Part 76)

- **Core Concept**: Correct structural wave anchoring for Fibonacci Retracements, avoiding arbitrary wick-hunting 24, 25.
- **Algorithmic Anchoring Rules**:
- **The Structural Origin Constraint**:
- Never anchor the start of a Fibonacci wave to an arbitrary intra-range wick 25.
- The anchor (Point 0 or 100) must originate at the **confirmed structural pivot low/high** that initiated the impulse leg 24, 25.
- **Confirmation Rule**:

- You cannot anchor a Fibonacci retracement to an unfolding impulse wave while price is actively extending 26.
- The terminus (Point B) is valid only **after an objective market reaction occurs** (e.g., a counter-trend reversal candle, a lower high on lower timeframes, or a break of the 7 SMA) 24-26.
- **Logarithmic vs. Arithmetic**: Always plot Fibonacci tools on **Logarithmic scale (Log)** when measuring crypto assets across large percentage swings to preserve proportional ratio accuracy 26.

Video 77: "فیبوناچی در تحلیل تکنیکال - قسمت اول" (Part 77)

- **Core Concept**: Mathematical foundations of Fibonacci ratios and the distinction between Retracements and Trend Extensions 27.
- **Ratio Taxonomy in the Strategy**:
- **Retracement Levels (Pullback Depths)**:
- 0.382 (38.2%): Shallow / high-momentum pullback (indicates an aggressive trend).
- 0.500 (50.0%): Psychological equilibrium level.
- 0.618 (61.8%): Golden Ratio; deep structural value zone.
- 0.786 / 0.77: Deepest valid retracement threshold before structural invalidation 25, 26.
- **Core Rule**: Fibonacci is never a standalone entry trigger 27. A Fibonacci level acts solely as a **potential support/resistance zone**; orders execute only when price action prints a confirmed pattern (rejection wick, candle setup, or trigger breakout) at that coordinate 27.

Video 78: "فیبوناچی قسمت دوم (پارت یک) - مارکت چگونه حرکت می‌کند؟" (Part 78)

- **Core Concept**: Market movement mechanics: **Price Retracement vs. Price Extension** 28, 29.
- **System Definitions**:
- **Retracement Phase (Correction / Pullback)**:
- Counter-trend movement contained within the high and low of the preceding impulse wave (\\(0\% \le \Delta P \le 100\%\\)) 29, 30.
- Characteristics: Decreasing volume, overlapping candles, smaller real bodies 31.
- **Extension Phase (Impulse Expansion)**:
- Directional movement breaking past the prior swing extreme (\\(\Delta P > 100\%\\)), moving into price discovery or cyclical expansion 28, 29.
- Characteristics: Expanding volume, clean directional candle closes, high velocity 31.
- **Algorithmic Application**:
- Retracements are used to position entries in alignment with the macro trend 32.
- Extensions are used to project mathematical take-profit targets (\\(1.272, 1.618, 2.0\\)) once prior swing highs/lows are broken.

Video 79: "فیبوناچی قسمت دوم (پارت دوم) - مارکت چگونه حرکت می‌کند؟" (Part 79)

- **Core Concept**: Multi-timeframe wave nesting (Upside vs. Downside Retracements across HWC and LWC) 32, 33.
- **Algorithmic Rules for Nested Cycles**:
- **Downside Retracement in Bullish Macro (HWC Bull / LWC Retracement)**:
- If the 4-Hour chart is in a valid uptrend and price begins pulling back toward the 0.382–0.500 Fibonacci zone, lower timeframes (15m) will print a downtrend 32.
- **Execution Filter**: Do not short the 15-minute breakdown. Instead, calculate the 4-Hour Fibonacci retracement zone and wait for the 15-minute timeframe to show trend exhaustion (diminishing volume, rejection wicks) inside the 4-Hour 0.382–0.500 pocket before triggering a Long 32.
- **The 0.382 Re-Acceleration Rule**:
- If an asset holds above its 0.382 retracement and breaks out of the pullback channel, classify momentum as exceptional; trailing targets expand to higher extension levels 32.

Video 80: "فیبوناچی قسمت سوم - نقاط حمایتی و مقاومتی" (Part 80)

1. **Core Concept**: Structural Confluence: Aligning Fibonacci Ratios with Static Horizontal S/R and Order Book Depth.
2. **Algorithmic Confluence Scoring**:
3. A technical level is graded for execution based on overlapping factors:
4. *Horizontal S/R*: A prior swing high or low at price \\(P\\).
5. *Fibonacci Level*: \\(0.382, 0.500,\\) or \\(0.618\\) falls within \\(P \pm \epsilon\\).
6. *Order Book Depth*: Heavy resting limit bids/asks exist at \\(P\\).
7. *Dynamic Moving Average*: 25 SMA or 99 SMA intersects at \\(P\\).
8. **Execution**: Single isolated Fibonacci lines are ignored; execution requires at least **two additional structural factors** intersecting within the same price zone.

Overall Progress Tracker

- **Completed**:
- Batch 1: Videos 1–10 (Foundations, Dow Theory, S/R, Capital & Risk Management)
- Batch 2: Videos 11–20 (Market Dominance Ratios, BB on RSI, Risk Expectancy, Profit Ladder)
- Batch 3: Videos 21–30 (Trend Health Analysis, Geometry, Multi-Timeframe Velocity, Volume Dynamics)
- Batch 4: Videos 31–40 (VPA Modeling, 3-SMA System, 15m Candle Setup Engine, Level 2 Order Books)
- Batch 5: Videos 41–50 (Order Book Execution, Indicators vs. Oscillators, Methods 1–5 of Oscillator Analysis)
- Batch 6: Videos 51–60 (Recalibration, MF Multi-Timeframe Scaling, MACD/ROC/ADX Mechanics, Session Timing, Written Plans)
- Batch 7: Videos 61–70 (HWC/MWC/LWC Cycles, Market Structure, Momentum Sizing, LA Setup, Leverage Mechanics)

- **Batch 8: Videos 71–80 (Optimal Entry vs. Price, Pre/Post Checklists, 10 Commandments, Justified Stops, Advanced Fibonacci)**
- **Final Stretch**:
- **Batch 9 (Videos 81–94)**: Fibonacci Mastery (Part 81), TensorCharts Microstructure (Part 82), Live Coin Watch & Altcoin Scanning (Part 83), Reverse-Engineering Market Edge (Part 84), Trading Psychology & Habits (Parts 85–86), Market Forecasting Realities (Parts 87–88), Daily Professional Routine (Part 89), Scenario-Based Trading (Part 90), The 20 Mandatory Survival Videos (Part 91), Whale Stop Hunting & Stop-Market Orders (Part 92), and Top-Down Analysis (Part 93).

Let me know when you are ready to complete the series with **Batch 9 (Videos 81 through 94)**!
