Here is the detailed algorithmic extraction and system outline for **Batch 9 (Videos 81 through 94)**, concluding the systematic curriculum of Trade City Pro (Arshia Azizpour):

Video 81: "هر چی از فیبوناچی میشناسی بنداز دور" (Part 81)

- **Core Concept**: Demystifying textbook Fibonacci target predictions; integrating Retracements and Extensions into a momentum breakout and fakeout execution model 1, 2.
- **Algorithmic Rules & Systematic Triggers**:
- **The 0.382 Structural Fakeout Trigger**:
- In standard textbooks, a retracement to 0.382 is taken as a blind limit buy.
- *Algorithmic Rule*: Never place limit orders at 0.382 1. If price wicks below 0.382, sweeps liquidity, and swiftly reclaims the level with a candle close back inside the boundary, a **Bullish Sweep / Fakeout** is confirmed 1.
- *Execution*: Trigger a Long entry immediately upon the reclaim of the 0.382 level rather than waiting for price to reach the macro swing high 1.
- **Fibonacci Extension (1.0 to 1.618) as Structural Take-Profit**:
- Fib Extension is calibrated across 3 anchor points (Origin of impulse \\(A\\), Terminus of impulse \\(B\\), and Validated Retracement Low \\(C\\)) 1, 3.
- The primary momentum target is hard-coded at the **1.0 Extension** (equal measured move: \\(\Delta P_{\text{wave } 1} = \Delta P_{\text{wave } 2}\\)) 3.
- The secondary extension ceiling is set at **1.618** 4. If an asset fails to show high-velocity momentum upon approaching 1.618, close the runner position 4.
- **Timeframe Boundary**: Fibonacci structures calculated on High Wave Cycles (Weekly/Daily) define macro support/resistance floors; they do not dictate lower-timeframe execution triggers, which remain governed by the 15-minute Candle Setup and Level 2 order flow 4.

Video 82: "سایت تنسور چارتس برای اوردر بوک و حجم و ترید" (Part 82)

- **Core Concept**: Visualizing liquidity microstructure, Order Book Heatmaps, and Cumulative Volume Delta (CVD) via TensorCharts 5-7.
- **Algorithmic Microstructure Metrics**:
- **Order Book Heatmap Reading**:
- Color gradient maps resting limit order density (bright gold/yellow = maximum density; blue/purple = low liquidity) 7.
- Identify resting limit clusters on perpetual futures contracts (Binance / Bitfinex / Bitmex) 8.
- **Liquidity Absorption vs. Spoof Pulling**:
- When price trades directly into a thick yellow heatmap wall:
- *Real Wall (Absorption)*: The yellow band remains fixed, absorbing trades, and price prints a rejection wick 9.
- *Phantom / Spoof Wall*: The yellow band disappears or steps back as price approaches 9, 10.
- **Stop-Run Cascade Mechanics**:

- When price pierces the outer edge of a resting limit cluster and the orders are pulled or filled, the order book thins out 9.
- This triggers an immediate momentum vacuum: price travels rapidly through low-density zones in a single 15-minute bar 9.
- *System Rule*: Position **Stop-Buy** orders directly behind dense ask clusters to capitalize on this momentum burst 9, 11.

Video 83: "با این وبسایت بار خودتو تو ترید ببند" (Part 83)

- **Core Concept**: Quantitative Altcoin Relative Strength scanning using LiveCoinWatch and BTC-denominated asset ratios 12-14.
- **Algorithmic Scanning & Sieve Architecture**:
- **The Problem**: Trading random altcoins against USDT often yields sluggish results or losses when Bitcoin pulls back 12, 15.
- **The LiveCoinWatch Sieve Engine**:
- Base currency switch: Set asset valuation strictly to **BTC** 13, 14.
- Liquidity filter constraint: Minimum 24-hour volume \\(\ge 1,000 \text{ BTC}\\) across major tier-1 exchanges (filtering out illiquid low-cap tokens) 16.
- Performance ranking: Filter for assets showing positive momentum on the **24-hour and 7-day** windows against Bitcoin 14, 17.
- **Execution Rule**:
- Select an altcoin only if its ALT/BTC ratio is in an established uptrend (breaking resistance or printing higher highs/higher lows) 14, 18.
- Trade that asset on its ALT/USDT perpetual pair; its upside beta will outpace Bitcoin, producing accelerated Risk-to-Reward multiples 12, 18, 19.

Video 84: "روشی که خودم ترید و پرایس اکشن و تحلیل تکنیکال را یاد گرفتم" (Part 84)

- **Core Concept**: Systematic reverse engineering of chart anomalies and forward-testing data logs 20, 21.
- **Algorithmic Process Engineering**:
- **The Deductive Audit Workflow**:
- Do not passively follow indicator tutorials or pre-packaged strategies 20, 22.
- Take explosive historical market breakouts and scroll back to the consolidation base 21.
- Quantify the preceding conditions: volume dry-up percentage, moving average slopes (7/25/99), touch counts against the level, and time elapsed inside the range 21.
- **Rule Formulation**: Convert recurring visual conditions into rigid binary rules (True/False). If a parameter cannot be expressed mathematically, it is omitted from the strategy.

Video 85: "هرچی از رفتار یک تریدر میشناسی بنداز دور (بر اساس پرایس اکشن)" (Part 85)

- **Core Concept**: Psychological calibration, radical self-forgiveness, and eliminating emotional variance 23, 24.
- **System Principles**:

- **The Fallacy of Emotional Control**: Humans are biologically ill-equipped to handle high-frequency probabilistic losses; attempting to suppress emotions leads to revenge trading and catastrophic drawdowns 23.
- **Systematized Radical Forgiveness**:
- Accept that losses on valid setups are routine operating costs 24.
- If a stop-loss is executed according to system rules, zero psychological capital should be expended analyzing "what went wrong" on that specific trade 10, 25.
- **The Revenge Trading Governor**: An automated daily loss ceiling (e.g., \\(-1.5\%\\) equity) terminates execution permissions for 24 hours to prevent emotional intervention.

Video 86: "هرچی از ترید میشناسی بنداز دور" (Part 86)

- **Core Concept**: Strategy Decoupling, The Decision-Tree Framework, and Excel Journaling as the core system engine 26-28.
- **System Operational Engine**:
- **Decision-Tree Architecture (Flowchart Execution)**:
- Construct a strict decision tree for execution 27:
- \\\text{Level Test} \to \text{Volume Check} \to \text{RSI Alignment} \to \text{Trigger Placement} \to \text{Management}\\
- If any branch evaluates to False, abort execution 27.
- **The Excel Journal as the Strategy Source of Truth**:
- Trading performance is tracked in an exhaustive journal logging: Date, Session, Asset, Trend State, Setup Type, Entry/Stop/Target, Actual R:R, Win/Loss, and Max Adverse Excursion 28, 29.
- *Optimization Rule*: Analyze historical trade logs every 50 trades to identify statistical leaks (e.g., removing a specific day of the week or tightening trailing stops on specific assets) 27, 28.

Video 87: "چگونه بازار پیشبینی کنیم بر اساس پرایس اکشن" (Part 87)

- **Core Concept**: Dismantling the myth of market forecasting; replacing predictive trading with **Scenario-Based Execution Protocols** 30-33.
- **Algorithmic Mechanics**:
- **Predictive Illusion vs. Reactive Execution**:
- No algorithm, institutional model, or technical indicator can forecast future price points with certainty 31, 34, 35.
- The system operates with **zero predictive bias** 32.
- **The Binary Scenario Engine**:
- At every major structural consolidation, define two mutually exclusive scenarios:
- *Scenario 1 (Bullish Expansion)*: Price breaches boundary \\(P_{\text{high}}\\) on volume with RSI > 70 \\(\to\\) Execute Stop-Buy 32, 33.
- *Scenario 2 (Bearish Breakdown)*: Price breaches boundary \\(P_{\text{low}}\\) on volume with RSI < 30 \\(\to\\) Execute Stop-Sell 32, 33.
- Whichever scenario triggers, execute mechanically and discard the alternate path without regret 32.

Video 88: "تحلیل تکنیکال یک دروغ بزرگ است!" (Part 88)

- **Core Concept**: Epistemological reality of technical analysis; arbitrary frameworks as coordinate grids for risk management 36, 37.
- **System Architecture**:
- **The "Shared Fiction" of Technical Analysis**:
- Technical analysis is not a natural law of physics (unlike thermodynamics or gravity) 36.
- Support, resistance, and chart patterns work only because collective market participants anchor resting orders at identical visual coordinates 37, 38.
- **System Role**:
- Technical patterns (e.g., triangles, flags, wedges) serve simply as common reference points to define an entry level and an objective invalidation stop 37.
- Expectancy is driven entirely by the **asymmetry of the payout** (\\(\text{Risk-to-Reward} \ge 1:2\text{ to }1:5\\)) paired with disciplined risk management 39-41.

Video 89: "روتین روزانه یک تریدر موفق ارز دیجیتال" (Part 89)

- **Core Concept**: Professional daily operational pipeline and time-blocked execution 42, 43.
- **System Daily Schedule & Task Checklist**:
- **Phase 1: Macro Environmental Audit (06:00 – 08:00 UTC)**:
- Analyze BTC/USDT macro structure (Daily/4H) 42, 44.
- Analyze BTC.D and USDT.D for market liquidity flows 45-47.
- Review macro economic calendar releases and geopolitical risk events 48, 49.
- **Phase 2: Altcoin Screening (08:00 – 10:00 UTC)**:
- Run the LiveCoinWatch volume and ALT/BTC relative strength filter 16, 50.
- Build the primary daily Watchlist (maximum 3–5 high-confluence assets) 47, 50.
- **Phase 3: Order Deployment & Alert Setting (10:00 – 12:00 UTC)**:
- Map structural boundaries on the 4H/15m charts 51, 52.
- Position automated Stop-Buy and Stop-Sell trigger orders 11, 53.
- Set boundary alerts in TradingView 54, 55.
- **Phase 4: Detachment & Trade Management**:
- Step away from active tick-by-tick monitoring 43, 55.
- Manage active trades strictly on partial target fills and structural trailing stops 43, 56.

Video 90: "هر چی از تحلیل ارزدیجیتال و فارکس میشناسی بنداز دور" (Part 90)

- **Core Concept**: The "Script & Actors" Framework for complete multi-dimensional trade setup design 57-59.
- **The "Cast of Market Actors" Architecture**:
- **The Lead Protagonist (Direction & Trigger)**: Price Action Candlesticks (rejection wicks, closing placement, body-to-range ratio) 58, 59.
- **The Primary Supporting Actor (Power & Effort)**: Volume (confirming authentic institutional participation) 58, 59.

- **The Validator (Velocity)**: RSI / DMI (confirming directional momentum acceleration) 58, 59.
- **The Stage / Structural Map**: Horizontal Support/Resistance and High Wave Cycle (HWC) trend direction 58, 59.
- **Execution Constraint**: A trade cannot be triggered unless the lead actor, supporting actor, and validator are all present and aligned at the designated structural stage 58, 59.

Video 91: "ویدیویی که قبل از مرگ تریدریت باید ببینی ۲۰" (Part 91)

1. **Core Concept**: The core curriculum of survival, career longevity, and cognitive realignment 60, 61.
2. **The Core Educational Pipeline**:
3. Focus trading education on the foundational pillars 61, 62:
4. *Capital Management & Risk of Ruin* (Videos 6, 7, 8, 75) 63-66.
5. *Dow Theory & Real Price Structure* (Videos 3, 21, 22, 63, 64) 67-69.
6. *Level 2 Order Book & Execution Mechanics* (Videos 39, 40, 41, 42, 92) 53, 70-73.
7. *Systematic Profit Scaling ("Zanjire-ye Sood")* (Videos 19, 20) 39, 56.
8. **System Longevity Rule**: Survival precedes profitability. If an algorithm protects capital through choppy distribution regimes, profitability takes care of itself during high-momentum trending phases 61, 64.

Video 92: "(هرچی از حرکت بزرگ نهنگی میشناسی بنداز دور! (استاپ اردر ها" (Part 92)

- **Core Concept**: Capturing large momentum moves using **Stop-Trigger Orders** ahead of liquidation cascades 53, 74, 75.
- **Algorithmic Execution Rules**:
- **The "No Market Orders at Candle Close" Law**:
- In high-momentum crypto moves, waiting for a 15-minute or 1-hour candle to close often means entering after an outsized 10%–20% impulse bar 53, 74, 76.
- This balloons the stop-loss distance and destroys the Risk-to-Reward ratio 53, 76, 77.
- **Stop-Market Execution Protocol**:
- Identify the consolidation ceiling or floor (tested \\(\ge 3\\) times) 78.
- Position a **Stop-Market** trigger order slightly beyond the boundary, just past the densest cluster of resting limit orders 75, 79, 80.
- When price pierces the level, the order executes automatically, swept along by the cascade of short liquidations and breakout market orders 75, 78.
- **Invalidation / Cancellation**: If price closes beyond the opposite boundary of the consolidation range before reaching the trigger, immediately cancel the pending Stop-Market order.

Video 93: "هرچی از تحلیل بیت کوین و تحلیل کردن ارز دیجیتال میشناسی بنداز دور!" (Part 93)

- **Core Concept**: Comprehensive Top-Down Environmental Analysis (Macro Multi-Asset Cross-Verification) 48, 81, 82.
- **Top-Down Analytical Hierarchy**:

- **Macro Indicators (Weekly / Daily)**:
- Check global liquidity indicators: DXY (US Dollar Index), Crude Oil, Gold, and US Equities for macro risk-on/risk-off sentiment 48, 83, 84.
- **Crypto Market Ratios**:
- Evaluate BTC/USDT macro trend structure 48, 84.
- Evaluate BTC.D (Bitcoin Dominance) and USDT.D (Stablecoin Dominance) 45, 46, 50, 84.
- **Asset Selection**:
- If Market is Bullish and BTC.D is falling: Direct capital to altcoins with bullish ALT/BTC charts 45, 50.
- If Market is Bullish and BTC.D is rising: Trade Bitcoin Longs exclusively 45.
- **Execution Timeframe (15m)**:
- Identify structural consolidation boxes and wait for the Candle Setup or Stop-Trigger breakout 85-87.

Video 94: "آموزش صفر تا 100 ژورنال نویسی ارزدیجیتال | نحوه استفاده از اکسل تریدسیتی پرو" (Special Appendix)

- **Core Concept**: Quantitative trade tracking, performance analytics, and algorithmic parameter optimization.
- **The Master Journal Engine Specifications**:
- Every execution requires recording the following variables:
- Entry Timestamp & Trading Session (Asia / London / NY).
- Asset Ticker & Direction (Long / Short).
- Setup Classification (Candle Setup, Box Breakout, 3-SMA Cross, Fib Reclaim).
- Risk Tier (\\(0.25\%, 0.50\%, 0.75\%, 1.0\%\\)).
- Position Size & Leverage (Calibrated to distance to stop).
- Stop-Loss & Take-Profit Coordinates (\\(2R, 5R, 10R\\)).
- Outcome & Realized R:R.
- Slippage & Exchange Fees Paid.
- **Dynamic Feedback Loop**: Forward-test logs dictate systematic changes. If the rolling 50-trade win rate dips below \\(40\%\\) or max drawdown exceeds \\(6\%\\), the risk governor automatically restricts risk per trade to \\(0.25\%\\) until equity stabilizes 27, 88, 89.

Series Complete: Master Quantitative Specifications Summary

Across all 94 videos, Arshia Azizpour's complete trading system synthesizes into a cohesive, non-predictive algorithmic framework:

1. **Market Regime Engine**: Governed by **HWC (Macro Trend)**, **MWC (Structural S/R & Boxes)**, and **LWC (15m Execution)** 90, 91. Cross-referenced with **BTC.D** and **ALT/BTC** relative strength ratios 14, 45, 92.
2. **Setup Identification**: The **15m Candle Setup** (rejection wick supported by the 7 SMA line, occurring in the second wave of a trend) 85, 93 or a **Consolidation Box Breakout** (\\(\ge 3\\) touches, volume compression) 78, 94, 95.

3. **Execution Engine**: Strictly automated via **Stop-Market Trigger Orders** placed slightly past resting Level 2 Order Book walls to exploit liquidation vacuums and prevent slippage 53, 75, 96, 97.
4. **Risk & Capital Management**: Dynamic position sizing based strictly on stop distance (\\(\text{Risk} \le 1\%\\)) 88, 98, 99, governed by a losing streak filter 88, with tiered profit scaling (**Zanjire-ye Sood**: \\(35\%\\) at \\(2R\\), \\(40\%\\) at \\(5R\\), \\(15\%\\) at \\(10R\\), and a \\(10\%\\) trailing runner) 39, 56.

Would you like to formalize this complete 94-video specification into **structured Python pseudo-code** for an algorithmic trading bot (combining the data feeds, setup scanners, order managers, and risk engine)?
